130 Bulls Sell!

80 Angus

50 Optimizers

***Balancing traits for over four decades emphasizing
real-world cattle with these essential traits:
good feet & legs, udder quality, tight sheath and good disposition***

Friday February 22, 2019

1:00 pm

At the Ranch • Hall, Montana

130 Bulls Sell!

80 Angus • 50 Optimizers

Sale Order

**Bulls will sell Lots 1-55 then the
Optimizer bull Lots 82-130
and finishing up with the
Angus bull Lots 56-81**

First Breeding Season Guarantee

Full coverage for 60 day breeding season.

- Broken penis (ruptured penis) in a single sire group.
- Structural problems due to feet and legs

50% Coverage of purchase price for 60 day breeding season

All bulls selling for \$3500 or more will be covered 50% by Skinner Ranch Seedstock if they are injured during their first breeding season. Breeding season is defined as the 60 day period following first turn out of the bulls. 50% of the value of the injured bull, minus 1/2 salvage value, will be given as a credit in the next year's sale, or toward a replacement bull if one is available, or cash back. Salvage value, if any, will be split equally between Skinner Ranch Seedstock and the buyer. All injured bulls must be diagnosed by a veterinarian. Please notify us as soon as possible should an injury occur and prior to the injured bull being sold for salvage.

- Broken penis (ruptured penis) injury in a multiple sire pasture
- Broken legs
- Stifle
- Disposition

All claims must be made by September 1, 2019. This does not include death as this can be insured for nor does it cover mismanagement or neglect. It does not cover injuries sustained prior to breeding season if your bull is turned out with other bulls.

Exceptions are foot rot, wire cuts, illness, and items out of Skinner Ranch Seedstock control.

Example 1: A \$7000 bull is injured, a credit of \$3500 minus 1/2 any salvage value will be given to the buyer.

Example 2: A \$4000 bull is injured, a credit of \$2000 minus 1/2 of any salvage value will be given to the buyer.

Example 3: A \$3000 bull is injured, no credit is given. Buyer retains all salvage value.

INTERNET AND PHONE BUYING

All Internet and phone buyers must be pre-registered with Northern Livestock Video Auction and have a buyer number to bid on the phone or internet. To register with NLVA call **866-616-5035** before Sale Day.

View the Online Catalog and video of each bull selling at **www.northernlivestockvideo.com**

Bidders who are successful in making purchases will be contacted following the sale to make payment and delivery arrangements.

Jeff Thomas, Prairie Star, Ag Weekly - 406-581-8859

Sale Locations and Directions: Take Drummond Exit 154 off Interstate 90 then take Montana Highway 1 south 6.5 miles to Hall. Turn west in Hall and go 1.5 miles on paved road to ranch on the right side of road.

Bids: For buyers unable to attend the sale, a video of the bulls is available to view on Northern or Skinnerranch.com. To discuss the sale offering or bulls on video call us (preferably several days in advance) and describe your needs and budget and we would be happy to assist you in your selection. There will be a number of phones available sale day, please call in advance to make arrangements. Bids may also be sent or called in to Skinner Ranch personnel, auctioneer, or press representatives. Bids are handled with confidentiality and all sight unseen purchases are satisfaction guaranteed.

Northern: Sale will be available live on the internet at www.northernlivestockvideo.com but will **NOT** be broadcast on television. See inside front cover for further information.

Ballyhoo Go!: Find our interactive catalog in the free Ballyhoo Go! app. Take notes, compare and filter bulls, view current EPDs, videos, color lot pictures, and more all in one place. See details on page 3.

Retained Ownership: Skinner Ranch Seedstock is retaining 1/3 revenue sharing interest on all bulls, unless otherwise stated. Full possession and salvage value sell on all bulls.

Terms and Conditions: Cattle sell under terms and conditions of the American Angus Association and the American Salers Association.

Payment for Bulls: Full payment is due sale day unless prior arrangements have been made.

Fertility and Soundness: All bulls will be fertility and soundness examined by sale day. Scrotal circumferences will be available sale day.

Bull Development: Bulls were developed at Hould Feedlot in Malta, MT. The bulls are developed on a high roughage ration to insure longevity and long term soundness. Bulls went up to Malta at the end of September and will come back to the ranch on February 12, 2019.

Herd Health: All bulls and the entire cow herd were tested and are negative for persistent BVD infection. The bulls are vaccinated with Pyramid 5, VibrioLepto plus Hardjo Bovis, Vision 8/Somnus, foot rot and pink eye vaccine, and Nasalgen.

Genetic Defects: All SRS cattle are either tested free of known genetic defects or have no pedigree risk.

Performance Data: All current performance data, including current weights, will be available on sale day.

Angus EPDs are current as of 1/20/19. Updated EPDs can be viewed at www.angus.org.

**Bull Videos are on
Northern,
skinnerranch.com
or in Ballyhoo Go!**

Liability: People attending the sale do so at their own risk and responsibility without liability on the part of the ranch owner or employees.

Delivery: \$50 discount on all bulls picked up within 7 days of the sale in MT (Due to Health requirements on out of state bulls it will take longer to get them ready to travel). Bulls will start to be delivered after March 10th. Free delivery on bulls within 500 miles on purchases over \$4,000. The balance of the distance will be at cost.

Volume Discounts: A 5% discount will be given on purchases of five or more bulls.

Loyalty Discount: A 5% discount will be given to loyal customers that have purchased bulls in each of the last two sales (February 2017 and February 2018).

162 Farm to Market West • Hall, MT 59837

Welcome to our 32nd annual production sale. We appreciate you taking time out of your busy schedule to evaluate our cattle and program. We also want to express our thanks to all our family, friends, neighbors, and customers, who have been incredibly supportive over the years as we continue to build our program. Without your support, we would not be able to continue doing what we enjoy so much. We also appreciate all the help that Eric has been for us.

At our female sale in November, it was great to see so many of our customers and friends who believe in our program and breeding philosophy. We will feature a lot of the same genetics that were shown in our female sale as well as some new and exciting sire lines.

It certainly has been another interesting year here in western Montana; "normal" weather is becoming harder to predict. We had an extremely wet spring that continued into July, creating some of the best hay crops we have seen with the least amount of irrigation water. At the same time, all the moisture decreased the nutrient density in a lot of the mountain pasture we run on. The soggy spring combined with a harsher late winter brought the calves in a little lighter than normal.

Despite this, we're extremely excited about the balanced set of bulls we're offering this year. The bulls have been fed out at Hould's Bull Development Center again in Malta, and they have again gained well while on feed. We continue to be tremendously pleased - as are our customers - with the job Houlds have done for us the last three years. The bulls will be in Malta until February 12. If you are in that area, please stop by and have a look. They will be ready for viewing here at the ranch on February 13.

This year's sale will be on Northern Video for you to watch and bid if you are unable to attend in person. There will be videos of all the bulls on Northern and www.skinnerranch.com again this year for your viewing pleasure.

As always, we invite you to stop by and look at our cattle and program or just visit at any time. We strive to produce balanced, problem-free cattle that are both profitable and sustainable for our ranch and yours. We'd love to hear any feedback you have about our cattle and what we can do to help make your program successful. Thank you again for considering our genetics in the future of your program. Please consider utilizing our volume and loyalty discounts discussed on the previous pages. We look forward to seeing you on sale day!

Kim, Tim and Ron

Sincerely,
Ron, Bev, Tim, Hayley, Teagan, Perry,
Kim, Michelle, Peyton, and Parker

Bull Mortality & Infertility Insurance

Novich Insurance Agency, agent for AXA XL Insurance Co

Jerry Gliko
(406) 860-3181
jgliko@3rivers.net

Jeff Thomas
(406) 581-8859
jeffthomas138@gmail.com

One Year Policy Term, from the date of the sale

Premium = 12.3% of the Purchase Price

Full Mortality Only Option = 5.8%

Full Mortality

100% of the value of the bull in the event of death or humane destruction as a result of a life-threatening injury.

Accident, Sickness & Disease (ASD) Infertility

100% of the value of the bull, less salvage value, in the event of permanent impotency, infertility or being incapable of serving females as a result of an accident, illness, or disease sustained during the policy.

*Skinner Ranch Seedstock
will pay half the insurance
on the Premium Policy*

Angus bulls in the sale have been AngusGS tested as noted.

Driving the science of better breeding

There's little room for error in the cattle business. Producers need the most advanced information to make smart selection decisions, and Angus Genetics Inc. (AGI) provides it through genomic-enhanced expected progeny differences (GE-EPDs).

GE-EPDs have become the industry standard for herd improvement, building on decades of science-backed genetic evaluation tools originated and maintained through the American Angus Association®, home to the largest and ever-growing single-breed beef cattle database.

EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide:

Note: SRS Angus bulls were recommended as Heifer Bull Potential by genomically enhanced EPDs and pedigree history. The size, shape, and calving ability of your program should also be factored into your decision

Increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs

Better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency)

The ability to make more rapid progress for traits that are important to you, due to:

- more accurate selection
- easier identification of genetic outliers
- the ability to propagate young animals with confidence earlier in their lives

In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8-33 calves, depending on the trait. That's valuable insight, offered regularly through the breed's weekly national cattle evaluation.

Trait	Progeny Equivalent	Trait	Progeny Equivalent
Calving Ease Direct	28	Milk	33
Birth Weight	21	Mature Weight	11
Weaning Weight	26	Mature Height	8
Yearling Weight	21	Carcass Weight	9
Dry Matter Intake	8	Yearling Height	11
Scrotal Circumference	13	Carcass Marbling	9
Docility	10	Carcass Ribeye	12
Heifer Pregnancy	14	Carcass Fat	10

How do you know if EPDs are genomic-enhanced?

Ask your breeder, refer to the registration paper, or look for the AGI GE-EPD logo, Angus GS™ powered by partner Neogen GeneSeek or the HD50k or i50k by partner Zoetis. These images indicate animals for which low-density or high-density genomic testing has been conducted and incorporated by AGI into GE-EPDs.

Heifer Bull Potential

- Genesis is an outcross bull that we used from Australia
- He is a long-sided, good footed bull that has very good carcass numbers
- His daughters are making exceptional females with great udders
- Lot 1 is a long, soft made bull that has a balanced set of EPDs combined with excellent performance
- The dam is a really nice young cow that is rising to the top

- Another top Genesis bull that is flat exceptional in his phenotype
- This bull is long, thick, and correct made with a super clean front end
- His dam has been a phenomenal cow that worked here until she was 15 years old
- She is a big spread cow that posts light BWs with phenomenal 205 day ratios
- Many of her daughters are working in our herd today

High Standards

At Graveley Black Mountain Ranch in the Avon valley we have been using SRS bulls for ten years. We are a black Angus cow-calf operation that utilizes native pasture and wild hay, put up with a beaver slide. I guess we are a little slow coming around.

The first thing that brought us to the Skinner Ranch Seedstock sale was their high standard for conformation and natural performance. At the Skinner Ranch they realize that not everybody has first and second cutting alfalfa to feed all winter.

The quality of the bulls is what keeps us coming back. The attention to detail that Skinners put in their cattle is obvious. From conformation and feeding to productivity and phenotype, they use a sharp knife. The uniformity of our calves has also increased. We no longer have twenty percent of our calves that don't fit the herd.

Ron, Kim, and Tim have always been willing to answer questions about any facet of the beef industry. From mineral packages to suggestions on what to breed the heifers to. Their advice is sound and conscientious. They would rather you the customer be happy than sell you a bull.

Charlie, Will, & Matt Graveley
Avon, MT

SRS Prime Cut 0103E

Vision Unanimous 1418

**LOTS 24-25
FLUSH BROTHERS**

Heifer Bull Potential

It's the Little Things . . .

I have been purchasing bulls from the Skinner Ranch for almost 15 years. I continue to purchase bulls there for the little things they are constantly striving to improve within their program. Their focus on disposition, udder structure, teat size, feet and legs, pelvic width and reproductive efficiency are just some of the things that are critical to all commercial operations. I have seen them pass up getting bigger several times to not sacrifice quality. In short, I continue purchasing bulls from the Skinner Ranch because of what I see them continue to do with their females and how that influences my herd.

Jason Parker • Parker Cattle Co.
Logan, Utah

• A long-spined bull out of a super correct made cow

Sharing Knowledge

Batty Family Ranch is located in Vernal, Utah. We run cattle on two different mountain ranges in the summer time with elevation ranging from 7,000 feet to 9,500 feet. The bulls from Skinner Ranch have always held up for us with good feet, legs, and disposition. They range to places for feed that others won't. That is why I was interested in the Salers breed.

The cows from these bulls have been excellent mothers. They are very attentive to calves, have good udders, and raise and wean heavy calves.

With two separate mountain ranges I can get 5 to 6 years out of a bull. The cattle are problem free. With 350 head of mother cows we have 98.5% calving unassisted; that is everything to us. They have the depth, thickness, and a look that is always very impressive to buyers that view them.

Skinner Ranch has been willing to help me in any and all decisions that we have had and are always willing to share their knowledge with us.

They have always stood behind the bulls they have sold. One of the bulls we purchased had his feet go bad before they delivered him. They called me and we discussed it. They replaced it with another one sight unseen. They were also willing to get us a different one if we had not been happy with the replacement. We were very pleased.

I would recommend them to anyone.

Batty Family Ranch • Morgan W. Batty • Vernal, UT

• A moderate framed Spur bull out of a high production cow

Connealy Spur

Balanced Traits

In 1988, Cathy Campbell bought the historic Hilger Hereford Ranch, which was established in 1889 at the Gates of the Mountains north of Helena, Montana. Today the ranch still operates as a cow/calf operation in a very trying environment, the ranch is all mountain terrain that receives an average annual rainfall amount of less than 10 inches.

We started buying optimizer bulls from the Skinners 11 years ago, looking to improve the carcass traits in our cattle. We keep going back year after year because of the well balanced traits of these cattle. The bulls are grown right with great feet and have the longevity to hold up in our challenging environment.

The attention the Skinners put into their females show when calving our ranch raised replacements. Our females out of Skinner genetics consistently have great dispositions with excellent mothering ability and udder quality. This all adds up to trouble free cattle. We will be back at the Skinner sale to get trouble free cattle that perform.

Ross Morgan, Ranch Foreman • Gates of the Mountains, Montana
 Hilger Ranch, owned by Catherine Campbell

LOTS 46-48

FLUSH BROTHERS

- Thunder is well-know for siring great females
- These flush brothers are long and deep
- With the phenomenal cow behind these bulls they should sire exceptional daughters

Bulls That Maintain Their Condition and Health

We have been taking in the Skinner Ranch Bull Sale for over two decades, it started with going to the sale with my father-in-law Sam Steffan as he bought registered bulls and heifers from Ron & Bev. I have enjoyed watching the Skinner family and ranch grow as they expanded into Optimizer and Angus cattle. We were also growing our herd of predominantly Angus cattle at the time.

We run on mostly native grass pasture in the foothills around Cascade, MT. Our bull herd is now over 90 percent SRS blood lines, with many of them half-brothers. We are impressed with the way they maintain their condition and structural health. SRS bulls fit our program of breeding length & thickness of loin into cattle.

We are also pleased with the calves' ability to grow and finish without becoming oversized for our part of the country.

Calves are born between March 1st and April 15th. In the fall of 2016, on the 2nd of November 100 percent of our steers loaded on the trucks with the average weight of 708 lbs. A pen of steers we thought were very even, thanks to the use of Skinner Ranch Bulls.

Tracy & Kelly Mikes • Cascade, MT

Heifer Bull Potential**The Best Kept Secret**

I'm a third generation farmer/rancher from central Montana. My ancestors came from Iowa in the 30s. I mostly farm, but also run about 200 cows. Since most of my efforts are directed to the farming, early on I looked for help to improve my cow herd and found it in Ron Skinner.

I purchased bulls in his first sale in 1987 and nearly every one since. It's been the best kept secret in the bull business. His knowledge, expertise, and veterinary skills have taken the guess work out of it for me. Not only his emphasis on bulls that work but his quest to build the perfect cow has formed a great balance. The traits we all look for: weaning weight, calving ease, disposition, maternal ability, and bull soundness have always been there. I've always been impressed with their length and thickness.

I've also purchased numerous females from Ron, and their fertility and longevity has been a great asset to my herd. I calve Feb 1st and ship Oct 5th and the weaning weights are consistently 700-750 lbs. That's with no special care and running a high percentage of older cows.

Ron has been very involved in the industry and this bodes well for us all. Now, his sons are continuing the tradition. It's been a great pleasure in my life to know Ron, Bev, and their family. I would recommend SRS to anyone.

Paul Tyler • Moore, MT

LOTS 56-59 FLUSH BROTHERS

- Balance was our high-selling bull in 2015
- He was admired for his length, depth of body, wide skeletal structure and excellent feet
- Balance's progeny are following in his footsteps with an excellent look and phenomenal performance
- These are a long set of flush bothers
- Their donor dam is a moderate female with excellent length and a nice udder

• A well put together younger bull

Climb That Mountain!

Miller Angus Ranch bought our first bull from the Skinner family in 1995. In 2007 we bought a Lead On son out of a very good cow from the Skinner Ranch. That bull's daughters are stand out cows in our herd.

We moved to Salmon, Idaho from Montana in 2012. In Montana, our cows were on irrigated pasture with very few hills to climb. With our Salmon Ranch came 5000 acres of BLM ground ranging from 4000 to 7000 feet in elevation. Quite an adjustment for those cows! But adjust they did and learned to climb those hills, work for a living, bring back a nice calf, and breed back in time. We try to calve in 60 days. In 2016, our conception rate was 3 open and 5 late cows, which we were extremely pleased with!

We have always found Ron and his family extremely helpful and knowledgeable and they stand behind their program 100%.

A big thank you from the Millers to the Skinners!

Miller Angus Ranch • John and Ruby Miller family • Salmon, ID

DON'T MISS AN OPPORTUNITY

How much is a top end bull worth?

Increase in pounds per calf as a result of a top performing bull

X

Number of cows bred per year

X

Average selling Price of calves for 4 years

=

Extra dollars you can pay for a better Bull

Example: A bull who will add 30 pounds over industry average, bred to 25 cows for 4 years.

30 pounds x 25 cows = 750 pounds x 4 years = 3000 pounds x \$1.50 = \$4500

This bull is then worth \$4500 **more** than a bull who keeps your weaning weights the same.

This is only half or less of the equation because you get the advantage of the replacement females. All good cattlemen that watch their cows know how much better those consistent top end cows do than herd average.

Another big bonus is their fertility and longevity because these are worth more dollars than weaning weights.

Another plus can be a result of selecting genetics out of programs that create labor efficiency in cows by having cows with good dispositions and quality udders.

What it takes to be an SRS donor

We have been utilizing embryo transfer for many years to increase the numbers and quality of cattle for our customers. So what do we look for in a donor? There is a long list of hurdles that she must first get over. First, we pick older proven females; we would like to have at least four to five calves out of a cow before we start flushing her. This gives us the ability to make sure she has the performance and predictability that is essential. We typically will pick females that have high ratios on all of their calves, but we will use some cattle that are closer to a hundred, if they have consistently raised light birth weight calves.

Obviously, the next thing is phenotype; at Skinner Ranch we have a very specific phenotype that we look for and that cow simply has to fit that "mold". We don't care what breeding, or breed she is; we are looking for a long cow with thickness, fleshing ability, good feet, and a good disposition. We also are very critical on udders. We select females that have balanced udders with flat bottoms, good teat placement, and small teats. Overall, we want to pick out females and build cattle with balance, we will not sacrifice udder quality for a high IMF ratio, or give up good feet for performance. We will always breed sound, functional cattle that are labor efficient so that our genetics work for you and you don't work for them.

The idea is to proliferate top cattle; by making sure we use cattle with many of the aforementioned traits, therefore we don't have to worry about culling out a bunch of cattle for bad udders, or bad feet down the road. This gives you confidence that these bulls will work for you. Not every mating goes as planned; you still have to pick out sires that you believe will enhance and continue these traits. We spend countless hours on the road and researching different herd sire potentials, we like to see bulls' mothers, their offspring and how they are doing in different herds across the northwest. We talk to different breeders, breed representatives, and people that see different herds on a regular basis to get an idea of what cattle may fit our "mold."

Donors in our program are both raised and bought. The cows we buy are cows with proven production in another herd. They are then brought here to prove themselves in our program. Our experience with these hand-picked, proven cows is that a little under 50% will actually make our donor program.

Flushing a young unproven female with big EPDs without proving herself and her production is not sound genetic planning. Any person with a calculator and computer can breed for numbers. We select and breed for balanced, functional cattle that work in the "real world". "Real world" cattle must be able to climb a mountain and travel lots of miles for forage, while bringing home a big calf and breeding back.

This is our passion and while it can be extremely frustrating it can also be very rewarding when you can put a top set of cattle together for the sale and feel good about offering them to the public. You can expect us to continue to seek out genetics that will move us forward and keep on the forefront of the industry so that you can buy cattle here that will move you forward with confidence.

Heifer Bull Potential

- SRS Dialed In was a phenotypic stand out in our 2016 calf crop
- We used this bull in our herd due to his incredible length, thickness, and balance
- Lot 83 is a balanced, square-made bull with a moderate BW
- His dam always puts a good heifer bull in the sale
- Maternal brother to SRS Battalion

SRS American 0984C

Good Advice and Honest Feedback

Bill and Penny Root of Scotia, Nebraska run 180 cows at a family farm on the eastern edge of the Sandhills. We purchased our first two Optimizer bulls from Skinner Ranch in 2004 and have been satisfied customers ever since.

The herd we started with 35 years ago included females purchased from a couple different seedstock producers and some black baldy lease cows. There was not a lot of uniformity in terms of size, type, temperament or nutritional needs and there were health concerns to address. We made some improvement over time, but when we brought in the Skinner bulls, we began to see very encouraging progress.

Weaning weights increased while the cow size moderated. The udder and prolapse problems that plagued us were eliminated. From year one, we were impressed with the vigor and will-to-live of the baby calves. It's very unusual to have any type of calving problem. These really are problem-free cattle.

The herd adapts so well to changes in available feedstuff. They are easy keepers and make great use of winter forage. We especially appreciate the disposition of the Skinner Ranch bulls, as either one of us can walk out in the pen or pasture and move them.

Our marketing plan depends on the resources available and what we think the market will do. Some years we sell shortly after weaning and other years we grow the calves for a while. Either way the cattle have been profitable and we're so pleased with how they look in the ring. Lots of length and thickness, adequate frame and very uniform. The maternal traits they emphasize, such as soundness, good udders and longevity are very predictable in females sired by their bulls and retained in the herd.

One reason the bulls have worked so well for us is the good advice we've gotten from Ron, Tim and Kim over the years. They've seen our cows and listened to what our needs are, and given very honest feedback about which bulls might be a fit. We've had a few opportunities to stop at their ranch but we made all our selections based on the catalog and videos along with talking to the Skinner family. They are trustworthy and really care about their customers' satisfaction. Skinner Ranch Seedstock bulls prove their value in our herd and they are the only kind we own.

- A bull that has a ton of eye appeal to him while still having the added length and thickness of the Dynasty progeny
- The dam is a beautifully made cow with a perfect udder at 10 years of age

Herd Improvement

We purchased the ranch we are on now in 1989 and moved our family from Glendive, MT, where Joe's family has ranched for 60+ years. Our cattle graze the plains of Eastern Montana. We began purchasing SRS bulls in 2007. We like the disposition of the bulls and they continue to help improve our herd. We try to purchase moderately sized bulls with thickness and length overall; they travel well to cover our cows. Last fall all of our steer calves were the heaviest we have ever had with a 637# average. That is with an end of March calving date, no creep feed, and a dry spring and summer. They were sold on October 24, and put on feed for 80 days. They had an average daily rate of gain of 3.3#. We are pretty proud of our operation; thank you to SRS for raising such quality outstanding bulls and standing behind them.

Your friends,
 Joe and Nadine Nemitz • Ismay, MT

**Athletic, Sound Bulls**

We have been using SRS bulls for 14 years. We run on the steep breaks of the Clearwater River. SRS bulls have worked great for us; they are sound and extremely athletic, have no trouble traveling the hillsides, and hold their flesh very well. I have also liked SRS bulls because I know what I am getting and have a good idea how their offspring will develop and perform. The countless hours Skinners have spent looking for their herd sires and the criteria they require for a cow to be in their herd takes a lot of the guesswork out of bull buying.

Reach Your Goal

Yoder Angus Ranch is a family owned cow-calf operation in Montana's Bitterroot valley. We want to thank the Skinner crew for their help with our Angus cattle. Our bulls and some cows come from SRS. Our bottom line is selling calves in the fall. Calves weighing 775 lbs on the heifers and 835 lbs on the steers is really exciting.

These bulls stay sound for a long time. Skinner Ranch cattle will help you reach your goal.

Truth and Honesty to Bet On

The Jacobs Ranch is just south of Stockett, Montana. My mom and dad, Helene and Bill, started it; growing up I helped them until 1986 when I took it over. My wife Kandy and I raised 4 kids here on the ranch.

I've known Ron for over 20 years and he is as honest as the day is long. His family is following in his footsteps. If they tell you something about a bull you can bet it is the truth.

This is our 10th year of buying bulls from the Skinner family. We started out buying one bull a year for 2 or 3 years. This year we are buying all our bulls there and plan on doing so for many years to come. We've bought 17 bulls from SRS and I've never had any regrets on them. Feet, disposition, fertility have all been outstanding. I only had to get rid of one bull early because he broke his leg.

I talk to Kim and Tim about the type of bull I'm looking for and they point me in the right direction. They really know what they're talking about. I've learned a lot from Ron and his sons.

This fall our steers weighed 735 lbs and the heifers weighed 690 lbs.

Integrity

Our ranch is located in the high desert of northern Nevada. The climate here is sometimes difficult for cattle to adapt to, snowy sometimes cold winters to hot and dusty summers. We are very fortunate to have been buying bulls from Skinner Ranch since 1990 as the Optimizer and Salers genetics fit very well.

The Salers' maternal influence in their herd, has helped us create a herd of cows that doesn't require a lot of babysitting. They are able to calve on their own, mother, and raise their calves with minimal help from us. Cows get out and travel to feed and water, whether on sparse lower elevation pastures or in steep mountainous summer country.

In addition, Ron has been so helpful sharing his knowledge of cattle and herd health issues and that has been a tremendous asset to us. The last several years, Tim and Kim have been delivering bulls and are more than helpful keeping us informed about their bulls and breeding program. The integrity of the Skinner family is second to none.

Jay & Glynis Wright • Tuscarora, NV

Skinner Bulls Meet Our Needs Every Time

NLD Inc. is a family cow-calf, hay, grain, and horse operation. We are based out of Choteau, Montana and our operation runs in three north central counties: Teton, Pondera, and Choteau.

We have been using Skinner Optimizer and Salers bulls for over 15 years.

Our main objective in bull selection is maternal bulls with longevity, easy maintenance, and as much performance as we can get without sacrificing our primary goals. We select bulls that make great, fertile daughters with udder quality, milk, disposition, and doability to bring in a quality calf every year—NO exceptions.

Skinner bulls meet our needs every time.

Ron, Kim, and Tim are very easy to work with and are a great help with bull selection. In fact, in all the years we've used Skinner bulls, I've only been to two sales. Their judgment, knowledge of their cattle, and honesty make buying sight unseen an easy option.

As long as I'm in the business and Skinners are raising bulls, I plan to be a customer.

Nels DeBruycker • Choteau, MT

Beef Leaders Institute*Tim Skinner*

In February, I was among twenty-four people across the U.S. who were selected to attend the BLI in Missouri in June. I flew into St. Joseph, Missouri and we began with a meet and greet reception at our hotel.

The next morning, we were bussed to the American Angus Headquarters. We were given an overview of AAA and the different offices in the building which included Member services, Angus Productions, Angus Genetics, Inc., Information Systems, Angus Link, Angus Foundation, Commercial Programs, and Events and Education. We toured around the office and spoke to people who were working in these departments and there was Q and A between the participants and staff. They broke down everything from how registrations were submitted and issued to how they processed DNA samples and sent them on to Neogen. The staff at AAA was incredible, some of them have worked there for over 40 years. AAA is successful in part because of their determination to find and hire some of the best people in each of their respective fields that have drive and ambition to improve.

That night we travelled to Lincoln, NE. The next morning, we went to Neogen headquarters. There we followed a sample from intake until the data was interpreted and sent back to AAA. Some of the new things that Neogen is starting to explore is DNA typing rumen bacteria, CRISPR technology which is gene modification, and epigenetics which is whether certain genes are turned on to be expressed. We then travelled to Weborg Feeding Company that is run by three brothers. They strive to buy high quality cattle that will grade well and they can sell on the grid. They have expanded from just 500 head to a 25,000 head capacity. Next we toured Tyson Fresh Meats in Dakota City. We toured the entire facility and they showed us how they have continued production to breakdown carcasses further and how they made work stations compatible for people of all sizes and to work comfortably. Tysons major concerns were 70% of the cattle finishing in the same few months during the year, traceability, uniformity, tags on the hides and food safety.

Next we went to Trans Ova in Sioux City, IA where we got the full tour. A few interesting things I picked up was that it costs \$21,000 to clone an animal. All of their recipient cows are purchased from MT and WY. IVF collection of embryos can be done until the ovaries drop over the pelvic rim. After our tour of Trans Ova we all flew to Cleveland, OH.

Our next tour was Sysco Cleveland where we were greeted with a great "spread." This was an extremely interesting stop as we watched the process that they go through to get all the products (from meat to beverages to napkins) on a truck and delivered to a restaurant.

The next stop was Giant Eagle, a full-service grocery store. This store had a full bar, daycare, catering, and street side pickup. It was extremely impressive and like no grocery store I had ever seen before. I suppose this is a benefit to being located in the center of the country and thus commerce.

Our last stop was Wooster, Ohio where we toured the CAB headquarters. Here we ate extremely well from their CAB chefs out of their open kitchen. But we also learned about new product development, such as beef-tisserie. They showed us how to cook different cuts of meat. We were shown the ten qualifications a carcass must have to make CAB. The tour of the CAB offices showed the incredible history of CAB and how they decide which restaurants get to carry CAB, how to advertise, and even how to list it on their menu. They also take the time to show the chefs how to cook it properly. They then have an Auditing department to make sure the pounds of CAB sold match the amount marketed by restaurants, grocery stores and food services. Another great part of CAB was their in-house butcher shop where their butcher showed us the value of different parts of the carcass and how they are increasing that value with CAB. We learned that by cutting the primals differently and separating out different muscles you can increase the value of the carcass by hundreds of dollars.

This trip was a long six days with some early mornings and late nights and extensive travel. This is a brief summary of all that we learned and saw. It was an invaluable experience where I met many people across the beef industry and in the AAA and CAB. It was a great overview of how the beef industry works from pasture to plate and I was thrilled to be selected to be a part of it.
